Project Title

IslandBox: Local Products and Souvenir Marketplace

Project Overview

IslandBox is an online marketplace that promotes locally made products and souvenirs from island communities. The website allows customers to discover products such as local snacks, handicrafts, souvenirs, accessories, and other products made by local sellers.

Users can create an account, browse products, place orders, and pay through PayMongo's test payment system. A **Maps/Geocoding API** can be integrated to display seller or delivery locations.

Problem Statement

Local products and small businesses may have limited online visibility. Customers who want to discover local products may also have difficulty finding information about sellers and their products in one place.

Objectives

The project aims to:

1. Create an online platform for local products.
2. Give local sellers an online space to display their products.
3. Allow customers to register and securely log in.
4. Allow customers to browse and search local products.
5. Integrate a Maps/Geocoding API.
6. Provide an online ordering system.
7. Implement PayMongo test payment.
8. Display order and payment status.

Target Users

- Tourists
- Local customers
- Students
- Local product sellers
- Small businesses
- Souvenir buyers

Main Features

1. User Registration and Login

- Full name
- Email
- Password
- Contact number
- Delivery address

2. Local Product Catalog
Products may include:

- Local snacks
- Handicrafts
- Souvenirs
- Accessories
- Handmade products

Each product can show:

- Product name
- Description
- Price
- Seller
- Location
- Available quantity
- Product image

3. Search and Categories
Customers can browse products based on categories or search for a specific product.

4. Seller Location
A Maps/Geocoding API can be used to show the location of sellers or identify delivery locations.

5. Shopping Cart
Customers can add products to their cart and review their order before checkout.

6. PayMongo Payment
Customers can pay for their order through PayMongo's test checkout.

7. Order Tracking
Customers can view:

- Pending
- Paid
- Preparing

- Shipped
- Completed

External API

Maps/Geocoding API

The API can convert addresses into geographic information and display seller or delivery locations.

Payment Integration

PayMongo Test/Sandbox API

The website will implement a test checkout flow and handle both successful and failed payment scenarios.

Expected Output

The main process will be:

Register → Browse Local Products → View Seller/Location → Add to Cart → Checkout → Pay → Track Order

Unique Feature

IslandBox focuses on **local products and small sellers**, making the website more than just a regular online shopping system.
